Dear Thrive Health Hiring Team,

I am writing to apply for the Junior Software Developer position at Thrive Health in Calgary. With a Master of Science in Computer Science from the University of Calgary and hands-on experience building Python/Django APIs, PostgreSQL-backed services, data-processing workflows, and AI-assisted tools, I am excited by the opportunity to contribute to a product team using software and AI to improve healthcare experiences.

My backend development experience aligns closely with the technical foundation of this role. As a Back-End Developer at Asr Gooyesh Pardaz, I designed and implemented Django REST APIs for NLP, text-to-speech, and speech-to-text service plans backed by PostgreSQL. I built authentication workflows, implemented payment-service integration logic, stored plan and payment records in a relational database, and contributed to a WebRTC-based chatbot system. This work gave me practical experience with API design, database-backed features, debugging, and maintaining clear service behavior.

My graduate research strengthened the same engineering habits in a more data-intensive setting. As a Research Software Developer with BigGeo/Mitacs at the University of Calgary, I built C++ and Python software for scalable processing, storage, and retrieval of Earth observation data. I developed reproducible pipelines, improved one encoding workflow from 233 seconds to 26 seconds using C++ multithreading, and documented technical assumptions and performance trade-offs. I also built machine-learning workflows in Python and PyTorch, which makes Thrive's AI-first product direction especially interesting to me.

I also bring experience with Git, Linux, Docker, AWS-based coursework, GitHub Actions, JavaScript, Node.js, and technical communication through teaching assistant roles at the University of Calgary and Neuromatch Academy. While I would continue growing my production TypeScript and frontend depth, I have a strong foundation in Python, Django-style backend development, REST APIs, PostgreSQL, testing and debugging workflows, and learning new stacks carefully.

What draws me to Thrive Health is the chance to work on software where quality and empathy both matter. I like building systems that are reliable, understandable, and useful to real people, and healthcare is a domain where that care has real impact. I would be grateful for the opportunity to contribute my backend, AI, data, and documentation experience to your team.

Thank you for considering my application. I look forward to the opportunity to discuss how my background can contribute to Thrive Health.

Sincerely,
Amir Mirzai Golpayegani
