

August 17, 2026

Dear Hiring Team,

I am writing to apply for the Full-Stack Developer - New Grad position, Position ID J1025-0141, with CGI in Edmonton. With a Master of Science in Computer Science from the University of Calgary and hands-on experience in backend development, Python, C++, JavaScript, SQL, data workflows, and AI/ML projects, I am excited by the opportunity to grow as a developer while contributing to practical client solutions at CGI.

My graduate research focused on building scalable software and data-management solutions for large geospatial and Earth observation datasets. I developed C++ and Python systems for processing, encoding, storing, and retrieving satellite imagery, and I worked through the practical details of performance, data quality, testing, and reproducibility. One part of this work improved encoding performance from 233 seconds to 26 seconds for a 10-tensor process through C++ multithreading, which reflects the kind of practical problem solving I enjoy.

I also bring backend experience that fits the full-stack direction of this role. As a Back-End Developer at Asr Gooyesh Pardaz, I built Django REST APIs for NLP, text-to-speech, and speech-to-text service plans backed by PostgreSQL. I implemented authentication features, payment-service logic, and database-backed service records, and contributed to a chatbot system using GPT-style responses and FAQ data. These responsibilities gave me a strong foundation in APIs, databases, debugging, and delivering software that supports real users.

CGI's New Grad program is especially appealing to me because it offers exposure to a diverse portfolio of technologies while learning from experienced developers and architects. The role's focus on .NET, Java, Oracle DB, Jenkins, OpenShift, Git, Azure, SQL Server, Dynamics 365, and interest in AI/ML fits the direction I want to grow in: broad software engineering with strong data and AI awareness. While my strongest production experience is in Python/Django rather than .NET, I have a solid computer science foundation and a track record of learning new technical stacks quickly.

I have also developed strong communication and teamwork habits through teaching and research collaboration. As a teaching assistant at the University of Calgary and a Deep Learning Teaching Assistant with Neuromatch Academy, I explained technical concepts, supported students through programming and data workflows, reviewed project work, and helped teams reason through ambiguity. These experiences strengthened my attention to detail, written and oral communication, and ability to work independently while still contributing to a team.

I am particularly interested in CGI because of its combination of technical breadth, client impact, and ownership culture. I would be excited to contribute my software, data, AI/ML, and research background while continuing to build deeper experience in enterprise full-stack development. I am also comfortable with the Edmonton location and the expectations of a new graduate role in Canada.

Thank you for considering my application. I look forward to the opportunity to discuss how my experience can contribute to CGI's Edmonton team as a Full-Stack Developer - New Grad.

Sincerely,

Amir Mirzai Golpayegani
