

August 6, 2026

Dear Hiring Team,

I am writing to apply for the Junior Software Developer position at Convverge. With a Master of Science in Computer Science from the University of Calgary and hands-on experience building Python/C++ software, REST APIs, data-processing workflows, and automation tools, I am excited by the opportunity to contribute to practical client solutions while growing in Convverge's Microsoft cloud, SharePoint, and Power Platform environment.

In my graduate work with BigGeo, Mitacs, and the University of Calgary, I built software for scalable processing, storage, and retrieval of Earth observation data. This involved breaking complex technical problems into smaller implementation tasks, developing reusable C++ and Python components, automating data-preparation workflows, debugging performance issues, and documenting methods and results for thesis and publication work. I also improved an encoding workflow through C++ multithreading, reducing 10-tensor processing from 233 seconds to 26 seconds, which strengthened my habit of caring about both correctness and maintainability.

I also bring backend development experience that aligns with Convverge's focus on reliable business applications. At Asr Gooyesh Pardaz, I developed Django REST APIs backed by PostgreSQL for NLP, text-to-speech, and speech-to-text service plans; built authentication workflows; and implemented payment-related backend logic. That work gave me practical exposure to translating requirements into application features, integrating services, working with databases, and supporting user-facing systems.

What interests me most about Convverge is the combination of quality-focused engineering, mentorship, and real client impact. I am especially drawn to the chance to learn from experienced developers and consultants while contributing to Azure, Microsoft 365, SharePoint, and Power Platform solutions. My background is strongest in Python, JavaScript, Git, APIs, databases, cloud-based coursework, and technical documentation, and I am motivated to build quickly on that foundation in the Microsoft ecosystem.

Thank you for considering my application. I would welcome the opportunity to discuss how my software development background, problem-solving approach, and eagerness to learn can contribute to Convverge's client delivery teams.

Sincerely,
Amir Mirzai Golpayegani
