

August 6, 2026

Dear Praveen Kothapally,

I am writing to apply for the Python and AWS Developer contract role with Zortech Solutions. I am an M.Sc. Computer Science graduate from the University of Calgary with hands-on experience in Python, backend APIs, SQL, PostgreSQL, Docker, Git, Linux, AWS-based data workflows, and scalable data-processing systems.

My backend experience includes developing Django REST APIs for NLP, text-to-speech, and speech-to-text services backed by PostgreSQL, implementing authentication and payment-service logic, and supporting client-facing chatbot functionality. This work gave me practical experience translating requirements into maintainable backend services, debugging application behavior, and keeping implementation details aligned with real user needs.

In my graduate research role, I built Python and C++ software for large-scale Earth observation data processing, storage, and retrieval. I automated satellite imagery preprocessing, developed structured tensor-generation pipelines, improved processing performance, and documented design choices and performance tradeoffs for reproducible handoff. I also supported students in AWS-based data pipelines, cloud storage, debugging, SQL, database design, and scalable data workflows as a teaching assistant.

The Zortech role is especially interesting to me because it combines Python backend development with cloud-native application work, automation, reliability, and remote collaboration. I bring strong Python engineering, data workflow, API, database, debugging, documentation, and AWS-based pipeline experience, and I am confident I can ramp quickly on the specific AWS services and deployment practices needed by the team.

Thank you for considering my application. I would welcome the opportunity to discuss how my Python, backend, data-processing, and AWS-adjacent experience can contribute to this remote contract role.

Sincerely,

Amir Mirzai Golpayegani
