Qualifacts

Dear Hiring Team,

I am writing to apply for the Software Engineer I position at Qualifacts. I recently completed my M.Sc. in Computer Science at the University of Calgary, and I am interested in this role because it combines practical software engineering with AI-enabled product work: backend services, data processing, integrations, cloud-aware development, and clear collaboration with product and engineering teams.

My professional backend experience comes from Asr Gooyesh Pardaz, where I developed Django REST APIs backed by PostgreSQL for NLP, text-to-speech, and speech-to-text products. I worked on registration, Google login, password reset, email and phone verification, payment-service integration, and relational records for service plans and transactions. This gave me hands-on experience building API behavior around real user workflows, debugging backend logic, and maintaining database-backed services.

During my M.Sc., I built larger Python and C++ research software systems for geospatial and Earth observation data. I developed pipelines for data collection, preprocessing, validation, storage, retrieval, analysis, model training, and evaluation. One major project involved a DGGS-based framework for managing large spatiotemporal satellite datasets, where I designed retrieval-oriented data structures, implemented performance-sensitive components, and documented technical tradeoffs through a thesis and first-author publication.

I also bring strong ML and AI workflow experience that fits the iQ AI context. In my DEM super-resolution project, I used Python, NumPy, pandas, Rasterio, Google Earth Engine, and PyTorch to build data pipelines, train models, and evaluate outputs with statistical and domain-specific metrics. I have also been building an agentic job-search automation platform using LLM workflows, Google Sheets, Google Drive, Telegram API, Docker, and workflow automation tools. These projects strengthened my ability to connect data processing, model behavior, and user-facing automation.

My strongest fit for this position is in Python, REST APIs, PostgreSQL, SQL, Git, Linux, Docker, data workflows, debugging, and technical documentation. I have working familiarity with JavaScript and Node.js, and I am motivated to keep growing in TypeScript, React, cloud deployment, and healthcare software practices. I would bring a careful, learning-oriented engineering style and a strong respect for reliability in software that supports real clinical and operational users.

Thank you for considering my application. I would welcome the opportunity to discuss how my backend, data-processing, AI workflow, and research-software background could contribute to Qualifacts and the iQ AI team.

Sincerely,

Amir Mirzai Golpayegani
