

August 7, 2026

Dear Hiring Team,

I am writing to apply for the Junior Software Developer position at Helic & Co. With a Master of Science in Computer Science from the University of Calgary and hands-on experience building Python, C++, and JavaScript software, REST APIs, SQL-backed backend services, and data-processing tools, I am excited by the opportunity to join a collaborative engineering team and grow through mentorship while contributing to production code.

My background fits the core of this role: writing clean code, debugging issues, building features, and learning quickly in a real software environment. As a back-end developer, I built Django REST APIs for NLP, text-to-speech, and speech-to-text service plans backed by PostgreSQL. I implemented authentication flows, payment-service logic, and structured plan/payment records in a relational database, and I contributed to a WebRTC-based chatbot system using GPT-style responses and FAQ data. That experience gave me a practical foundation in backend development, databases, user-facing features, and careful debugging.

I also bring research software experience from my M.Sc. work with BigGeo, Mitacs, and the University of Calgary. I built Python and C++ pipelines for processing, storing, retrieving, and evaluating large scientific datasets. I automated preprocessing workflows, developed structured data pipelines, and improved one C++ processing workflow from 233 seconds to 26 seconds for a 10-tensor workload. This work strengthened my habits around correctness, performance, documentation, and working through technical problems step by step.

I am comfortable using Git and GitHub, and I have worked with Docker, Linux, REST APIs, PostgreSQL, JavaScript, and Python across projects. As a teaching assistant, I supported students in big data applications, working with data at scale, SQL, and database systems, which also helped me communicate technical ideas clearly and collaborate with people at different experience levels.

What appeals to me about this role is the chance to contribute as an early-career developer while continuing to improve through code reviews, Agile team practices, testing, and mentorship from senior engineers. I enjoy learning by building, asking precise questions, and taking ownership of small pieces of a larger system until they work reliably.

Thank you for considering my application. I would welcome the opportunity to discuss how my backend development, Python/JavaScript, SQL, debugging, and research software experience can contribute to Helic & Co's engineering team.

Sincerely,

Amir Mirzai Golpayegani
