

August 5, 2026

Dear Hiring Team,

I am writing to apply for the Python Developer position with HCLTech in Alberta. I am based in Calgary, hold an M.Sc. in Computer Science from the University of Calgary, and bring hands-on experience building Python software for backend services, data processing workflows, and large-scale technical systems.

My background fits the core of this role: practical Python development, Linux-based engineering work, Git-based collaboration, and database-backed application development. As a Back-End Developer at Asr Gooyesh Pardaz, I developed Django REST APIs for NLP, text-to-speech, and speech-to-text service plans backed by PostgreSQL. I also implemented authentication flows, payment-service logic, and relational data models, which gave me a strong foundation in writing maintainable backend code for production-facing services.

In my graduate research with BigGeo, Mitacs, and the University of Calgary, I built Python and C++ software for processing, storing, and retrieving large Earth observation datasets. This work required automating data pipelines, debugging Linux-based workflows, managing structured outputs, and improving performance for high-volume processing tasks. I used tools such as GDAL, Rasterio, SNAP, NumPy, Pandas, Docker, Git, and cloud-related workflows while working with data-intensive systems where reliability and clear documentation mattered.

I also bring a strong learning curve and communication background. Through teaching assistant roles in big data applications, data-at-scale, and database management systems, I supported students with SQL, data pipelines, cloud storage, debugging, and scalable workflows. These experiences strengthened my ability to explain technical tradeoffs, troubleshoot systematically, and collaborate with people who have different levels of technical depth.

HCLTech's Python Developer role interests me because it combines hands-on Python engineering with Linux systems, data-oriented work, and client-focused delivery. I would be excited to contribute a careful, dependable engineering style, strong Python fundamentals, and the ability to learn quickly across tools and environments. While my most recent work has been research-focused, it has consistently required production-minded habits: version control, reproducibility, performance awareness, structured data handling, and practical problem solving.

Thank you for considering my application. I would welcome the opportunity to discuss how my Python, backend, Linux, and data-processing experience can support HCLTech's work in Alberta.

Sincerely,
Amir Mirzai Golpayegani
