

August 5, 2026

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer position, requisition BF-REQ-3169, with Clio. With a Master of Science in Computer Science from the University of Calgary and hands-on experience in Python, PyTorch, model evaluation, data pipelines, backend engineering, and LLM-based workflow automation, I am excited by the opportunity to help Clio build AI tools that make legal work more efficient and accessible.

My graduate research focused on developing machine learning and data-management systems for large scientific and geospatial datasets. In my digital elevation model super-resolution project, I built Python and PyTorch workflows for data collection, preprocessing, model training, and evaluation. I trained deep ResNet models for 4x reconstruction tasks and evaluated model quality using RMSE, slope, TRI, TPI, and wavelet-based metrics. This work required the same habits I would bring to Clio: careful preprocessing, rigorous experimentation, baseline comparison, failure analysis, and clear communication of model limitations.

I also bring software engineering experience that aligns with Clio's cross-functional AI environment. As a back-end developer at Asr Gooyesh Pardaz, I developed Django REST APIs for NLP, text-to-speech, and speech-to-text service plans backed by PostgreSQL, and contributed to a WebRTC-based chatbot system using GPT-style responses and FAQ data. In my current job-search automation project, I am designing LLM-based workflows for resume and job matching, skill-gap analysis, application decision support, and structured tracking through Google Sheets and Drive. These projects have strengthened my interest in using language models thoughtfully over real, messy, semi-structured data.

Clio's AI team appeals to me because the role combines model development, NLP and transformer-based modeling, structured and unstructured data, LLM solutions, code review, and collaboration with ML, MLOps, product, and full-stack teams. My background does not come from legal technology, but it does include strong ML fundamentals, research discipline, backend development, technical communication, and a genuine appetite for learning fast in product-oriented teams.

Thank you for considering my application. I would welcome the opportunity to discuss how my machine learning research, Python engineering experience, and growing LLM workflow background can contribute to Clio's mission to transform the legal experience for all.

Sincerely,  
Amir Mirzai Golpayegani
