

August 17, 2026

Dear Hiring Team,

I am writing to apply for the NEW GRAD AI Developer position, Position ID J0726-0385, with CGI in Toronto. With a Master of Science in Computer Science from the University of Calgary and hands-on experience in Python, PyTorch, machine learning, data pipelines, backend APIs, and AI workflow automation, I am excited by the opportunity to build practical AI-enabled solutions for real business problems.

My graduate research focused on scalable machine learning and data-management solutions for large geospatial and Earth observation datasets. I designed, trained, and evaluated deep neural networks in Python and PyTorch, built reproducible workflows for data preprocessing and model evaluation, and documented technical assumptions, limitations, and results. This experience aligns closely with CGI's need for new graduates who can help design, test, validate, and support AI-enabled prototypes.

One of my primary research projects examined the reliability of deep-learning models for digital elevation model super-resolution. Through systematic experimentation, I found how random data splitting could produce overly optimistic results and designed region-based validation methods that better reflected real-world model behavior. That kind of careful evaluation is directly relevant to prompt testing, model response validation, and output quality checks in enterprise AI solutions.

I also bring backend and automation experience that fits CGI's focus on integrating AI capabilities into applications, workflows, APIs, and cloud platforms. As a back-end developer, I built Django REST APIs for NLP, text-to-speech, and speech-to-text services backed by PostgreSQL. More recently, I have been building an agentic job search automation platform using LLM workflows, AI agents, Docker, Google Sheets, Google Drive, and Telegram API integrations.

CGI's role is especially appealing to me because it combines artificial intelligence, automation, digital transformation, and client-facing problem solving. I enjoy turning AI ideas into working tools, asking good questions, documenting tradeoffs, and communicating technical ideas clearly. Through research, teaching, and project work, I have learned to work through ambiguity, seek feedback, and keep improving solutions based on evidence.

I would welcome the opportunity to contribute my Python, machine learning, data, API, and research background to CGI as a NEW GRAD AI Developer. I am comfortable with the hybrid requirement in downtown Toronto and excited to keep learning while helping design, test, document, and improve AI-enabled solutions for clients.

Thank you for considering my application. I look forward to the opportunity to discuss how my experience can contribute to CGI's AI, automation, and digital transformation work.

Sincerely,
Amir Mirzai Golpayegani
