SMART Technologies

Dear Hiring Team,

I am writing to apply for the Junior Software Engineer position at SMART Technologies in Calgary. I recently completed my M.Sc. in Computer Science at the University of Calgary, and I am interested in this role because it combines backend services, real-time communication systems, device-scale software, testing, documentation, and meaningful work in education technology.

My graduate research with BigGeo, Mitacs, and the University of Calgary focused on building reliable software for large Earth observation datasets. I developed C++ and Python systems for scalable processing, storage, and retrieval; automated satellite imagery preprocessing; and built DGGS-based encoding pipelines that converted imagery into structured tensor files. This work gave me practical experience with data structures, performance, debugging, documentation, and service-like retrieval workflows.

I also bring backend development experience from Asr Gooyesh Pardaz, where I developed Django REST APIs, PostgreSQL-backed service logic, authentication features, and payment-service integrations for NLP, text-to-speech, and speech-to-text products. I contributed to a WebRTC-based chatbot system using GPT-style responses and FAQ data, which gave me useful exposure to communication-oriented product workflows and systems that connect users through software.

SMART Control is interesting to me because it is not just a web application. It connects, monitors, and delivers content and alerts to devices in the field, including emergency communication use cases for classrooms. My background is strongest in Python, C++, Django, PostgreSQL, Linux, Docker, and data systems rather than Java/Spring Boot and Vue 3, but the underlying engineering responsibilities are familiar: build reliable back-end functionality, integrate with frontend teams, improve coverage with testing, keep services observable, and communicate clearly in an Agile team.

I am a fast learner and comfortable moving across technologies when the fundamentals are clear. My research and teaching work strengthened my ability to explain technical tradeoffs, document decisions, debug unfamiliar systems, and keep improving code based on evidence. I would be excited to bring that mindset to SMART while growing into the Java, Vue, WebSocket, and continuous-deployment parts of the stack.

Thank you for considering my application. I would welcome the opportunity to discuss how my backend software, scalable data-systems, and technical communication background could contribute to SMART Technologies.

Sincerely,

Amir Mirzai Golpayegani
