HUB International

Dear Hiring Team,

I am writing to apply for the Data Scientist position at HUB International in Calgary. I recently completed my M.Sc. in Computer Science at the University of Calgary, and I am interested in this role because it sits at a practical intersection I care about: using data, machine learning, cloud-aware workflows, and clear communication to help teams make better business decisions.

My graduate research focused on scalable machine learning and data-management solutions for large geospatial and Earth observation datasets. I built Python and C++ workflows for data collection, cleaning, preprocessing, validation, storage, retrieval, model training, and evaluation. This work required careful attention to data quality, sampling strategy, statistical interpretation, performance tradeoffs, and reproducibility.

In one project, I used Python, NumPy, pandas, Rasterio, Google Earth Engine, and PyTorch to build DEM super-resolution pipelines, train models, and evaluate outputs with statistical and terrain-aware metrics. In another, I developed a DGGS-based framework for managing and retrieving large volumes of spatiotemporal satellite data, integrating multiple sources and assessing storage and retrieval performance. I communicated this work through a first-author publication and M.Sc. thesis.

Beyond research, I bring backend and workflow automation experience that would help me contribute to HUB's AI Enablement work. As a Back-End Developer, I built Django REST APIs backed by PostgreSQL for language technology products. I am also building an agentic job-search automation platform using LLM workflows, Google Sheets, Google Drive, Telegram API, Docker, and workflow automation tools, which has made me think carefully about how AI systems become useful when connected to reliable data and real user processes.

I also enjoy communicating technical work clearly. As a teaching assistant, I supported students in data science, programming, database systems, big data applications, and working with data at scale. My strongest fit is in Python, SQL, machine learning, statistical evaluation, data pipelines, cloud-data workflows, documentation, and cross-functional communication. I have less direct insurance-domain and Power BI experience than a more senior candidate, but I learn quickly and bring strong foundations in applied ML, large-scale data handling, and reliable technical workflows.

I am especially excited that this opportunity is based in Calgary, where I live and hope to keep building my career. I would welcome the chance to contribute my data science, AI workflow, and research-software background to HUB International.

Thank you for considering my application. I would be glad to discuss how my background could support HUB's data science and AI Enablement work.

Sincerely,
Amir Mirzai Golpayegani
