

August 6, 2026

Dear Hiring Team,

I am writing to apply for the Data Scientist, Fall 2026 Co-op/Internship position at BMO in Toronto. I am an M.Sc. Computer Science graduate from the University of Calgary with hands-on experience in Python, machine learning, data processing, software development, testing, debugging, documentation, and database-backed backend systems.

My graduate research focused on building reliable software and analytical workflows for large geospatial and Earth observation datasets. I developed Python and C++ systems for scalable data processing, designed reproducible pipelines, evaluated model performance, and documented design tradeoffs for technical audiences. In one project, I trained and evaluated PyTorch models for digital elevation model super-resolution, using systematic metrics and validation strategies to understand model behavior rather than relying on surface-level accuracy.

I also bring practical backend engineering experience from my role as a Back-End Developer at Asr Gooyesh Pardaz, where I built Django REST APIs backed by PostgreSQL, implemented authentication and payment-service logic, and contributed to client-facing NLP and chatbot systems. This experience aligns with BMO's emphasis on translating requirements into technical specifications, developing and testing software, troubleshooting issues, following version-control practices, and supporting secure, maintainable technology services.

Beyond implementation, I have developed strong communication and collaboration skills through teaching assistant roles at the University of Calgary and Neuromatch Academy. I supported students in AWS-based data workflows, large-scale data processing, SQL, database design, and deep learning, which strengthened my ability to explain technical concepts clearly, ask good questions, and help others move from requirements to working solutions.

I am interested in BMO because the role combines data science, software engineering, and responsible financial technology. I would be excited to contribute my Python, machine learning, backend, and analytical problem-solving background while continuing to grow in cloud computing, microservices, quality assurance, and production-oriented development within a collaborative banking environment.

Thank you for considering my application. I would welcome the opportunity to discuss how my technical background and learning agility can contribute to BMO's technology teams.

Sincerely,

Amir Mirzai Golpayegani
